TABLE OF CONTENTS

1. INTRODUCTION TO RULE-ORIENTED PROGRAMMING IN LOOPS 15

1.1 Introduction 15

1.2 Basic Concepts 16

1.3 Organizing a Rule-Oriented Program 17

1.4 Control Structures for Selecting Rules 18

1.5 One-Shot Rules 22

1.6 First-Last Rules 23

1.7 Saving an Audit Trail of Rule Invocation 23

1.7.1 Motivations and Applications 23

1.7.2 Overview of Audit Trail Implementation 24

1.7.3 An Example of Using Audit Trails 24

1.8 Comparison with Other Rule Languages 26

1.8.1 The Rationale for Factoring Meta-Level Syntax 26

1.8.2 The Rationale for RuleSet Hierarchy 27

1.8.3 The Rationale for RuleSet Control Structures 28

1.8.4 The Rationale for an Integrated Programming Environment 29

2. THE RULE LANGUAGE 31

2.1 Language Introduction 31

2.2 Kinds of Variables 32

2.3 Rule Forms 34

2.4 Infix Operators and Brackets 35

2.5 Interlisp Functions and Message Sending 37

2.6 Variables and Properties 38
2.7 Computing Selectors and Variable Names 39
2.8 Recursive Compound Literals 40
2.9 Assignment Statements 41
2.10 Meta-Assignment Statements 41
2.11 Push and Pop Statements 42
2.12 Invoking RuleSets 42
2.13 Transfer Calls 43
2.14 Stop Statements 43

3. USING RULES IN LOOPS 45
3.1 Creating RuleSets 45
3.2 Editing RuleSets 45
3.3 Copying RuleSets 46
3.4 Saving RuleSets on Lisp Files 47
3.5 Printing RuleSets 47
3.6 Running RuleSets from LOOPS 47
3.7 Installing RuleSets as Methods 48
3.8 Installing RuleSets in ActiveValues 49
3.9 Tracing and Breaking RuleSets 50
3.10 The Rule Exec 51
3.11 Auditing RuleSets 52
3.12 Loading Rules 52
3.13 Known Problems 52
