

DEMO -- utilities for running demos / tutorials in Medley

includes

```
  OPEN-URL (URL)
              (rename of ShellBrowse)
  MEDLEY-CONTRIB (REPO)
              shows GitHub contributors to given repo
              uses ShellBrowse
  BKSYSOBJ(string)
```

DEMO-\*.TEDIT

```
  contains scripts / TEDIT file talks
  add your own
```

BKSYSOBJ is the start of a facility

```
(TEDIT.INSERT.OBJ (BKSYSOBJ "(CONS NIL)" (TEXTSTREAM(WHICHW)]
```

You should see (CONS NIL) in the TEDIT stream, clicking should shove (CONS NIL into an Interlisp exec, waiting for ) or ]. (probably the image objectg should be shaded, may also have to set the RDTBL flag on BKSYSBUF for strings, but this is a start).
