(**NC.MakeSearchCard**

[LAMBDA (Card Title NoDisplayFlg ParamList InterestedWindow RegionOrPosition)

; Edited 5-Aug-88 13:53 by Trigg

;; Search for cards with specified characteristics and create a list card containing pointers to these cards. For now search is limited to cards whose
;; title contains a specified string.

;; rht 11/8/84: Fixed some confusion between ListCardID and ID variables.

;; fgh 11/17/85 Updated to handle multiple notefiles and crad objects.

;; rht 4/11/86: changed to call NC.ApplySuper.

;; rht 10/21/86: Now deletes card if no search string specified.

;; rg 3/16/87 NC.DeleteNoteCards -> NC.DeleteNoteCard

;; rht 8/5/88: Added RegionOrPosition arg and passed to super's makefn. Also added ParamList and InterestedWindow args.

```
