Xerox Lisp includes utilities for generating hardcopy in "Press" format. This is a file format for communicating documents to Xerox laser xerographic printers of the Press, Spruce or Fullpress class, which are known by the names Dover, Penguin, Raven and Spruce.

Note: Press, along with other classes of printers, is described fully in two sections in the IRM, "Hardcopy Facilities" and "Fonts."

The reason for putting this document into the Lisp Library Modules Manual is that support of these printers is no longer an integral part of the system.

# Requirements

FONTS.WIDTHS

PUPPRINT.LCOM

A Press print server

## Installation

Load PRESS.LCOM from the library.

Set the variable PRESSFONTWIDTHFILES (see below).

#### **User Interface**

You can use the usual means:

- HARDCOPY in background (right-button) menu
- HARDCOPY in FileBrowser menu
- Functions typed into the exec window (see below)

### **Functions**

DEFAULTPRINTINGHOST PRESSFONTWIDTHFILES SEND.FILE.TO.PRINTER LISTFILES

[Variable]

[Variable]

[Function]

[Function]

(For details about all the above, see the *IRM*.)

## Limitations

PRESS does not support NS characters or NS fonts.
