abort To terminate any action before it is finished. When selected from

the "Notefile Ops" menu, Abort means to close a notefile without

saving your changes to the notefile.

back links System generated to-links. These links point from a Document or

LinkIndex card back to the source cards from which the Document

or LinkIndex was built. Hence the name "back link."

background menu The menu brought up by holding the right mouse button down in

the gray region not associated with any windows.

and LinkIndex card parameters.

Banner The location from which you access old cards and create new ones. Also called "notefile Banner." The "Solar System" Banner is

shown below.

Solar System; 1
New Cards | Special Cards

bit map A two-dimensional grid of zeros and ones where a zero represents

white space and a one represents black space. The screen is a bit-

mapped display.

break The state entered by NoteCards during error processing that allows

you to recover from the error by typing Lisp commands in the break window. If you don't know what to do with a break, type ^ after the

prompt to abort the operation, then start over.

When a break has occurred, we recommend that you perform an

Inspect & Repair on the notefile after you have closed it.

break window A window that opens when a break occurs. The title is usually the

name of the broken function.

button A button on the two- or three-button mouse.

card Refers to any card type in the NoteCards system. Contrast with the

entry for **note card**.

card contents The text or graphics in the body of a card.

card menu The menu brought up when you hold the left mouse button down in

a card's title bar.

card type Specifies a card's functional capabilities. NoteCards comes with

eight card types. Each card type is specalized to perform a specific of operation, e.g., Search cards perform searches on card titles.

Document cards create documents.

card-type bit map The image on the left of the link icon which indicates the card type.

In the image below, the card-type bit map indicates a FileBox card. See the section "Change Display Mode" in Chapter 8 for more a

complete list of card-type bit maps.

Table of Contents

card UID The number given to each card which uniquely identifies it. See

Appendix A for more information.

caret

A blinking arrowhead in a window, **A**, indicating where the keyboard characters will appear when typed. You change the position of the caret by moving the **mouse cursor** and pressing the left mouse button.

cascading menu

Same as submenu.

cross-file link

A link which points to a destination card stored in a notefile other than the source card's notefile.

click

To press and release a mouse button, the left button unless otherwise indicated.

connected directory

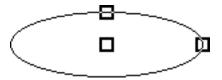

The directory the system uses by default when you do not specify a complete path when saving, retrieving, or loading a file. Also referred to as the default directory.

connection

A line drawn between two nodes in a Graph or Browser card. A connection may or may not represent a link.

control point

A position that helps to determine the location and shape of a Sketch element. Each element has one or more control points. In the following sketch, the ellipse has three control points indicated by the boxes.

current selection

The text in a Text card that is marked as selected in some way (underlining, highlighting, etc.) and has the caret at one end of the selection, e.g.

This is unselected text,
This is selected text,
This is unselected text.

This is unselected text, This is selected text, This is unselected text,

dashing

The property of a line that causes it to be dashed., e.g.

Links in browser cards may be dashed.

default

An action taken (or value specified) unless another is specified by the user.

deleted icon

An icon which appears in a source card when the destination card a link points to is deleted. Shown below.

Deleted

destination card

The card which is opened (or flashed if already open) when you click on a link icon.

directory

The name of a group of related files. In UNIX a directory is a file containing a list of other directories and files.

extension

A string appended to a file name, indicating the type of file. The extension is separated from the file name with a period; the version number is separated from the extension by a semicolon. Sketch files have the extension ".sketch" followed by a version number. See **file name**.

file name A character string used to refer to a file stored on disk. A full file

name is composed of the file name followed by the file extension, followed by the version number, e.g. "Solar System. NOTEFILE;2." Here the file name is "Solar System," the extension is "NOTEFILE," and the version number is "2." The file name and extension are separated by a period and the extension and version number are separated by a colon. See **extension** and **version number**.

file server A computer that provides file storage and retrieval service for users on the network.

A collection of characters in one size and style of type, e.g., 10-

point Modern Italic.

font family A complete assortment of letters, numbers, punctuation marks, etc., of a given design, such as Modern or Classic.

font size The distance from the top of the highest character in a font to the bottom of the lowest.

forward links To-links and global to-links. This term is used when setting Browser and LinkIndex card parameters.

from-link A link corresponding to every to-link and global to-link. From-links point from the destination card to the source card. All from-links are global.

global links Links whose start point is the card itself and not some point in the card's contents.

Links whose start point is a card itself and whose end point is another card. These links are not represented by link icons in a card's body. To see and access these link icons, you must choose the Show Links option from a card's left button title bar menu.

graph-based cards Cards based on the graph editor. Graph and Browser cards are graph-based cards.

hard copy The physical copy (on paper) of an on-screen document.

host Any machine on a network. Often used to refer specifically to a machine that provides a network service, such as filing.

An on-screen pictorial image which can represent some other object, such as card, window, or link.

image object A graphic image, such as a Sketch drawing, graph, bit map, link icon, horizontal rule, etc.

initialization file

A file that is loaded when NoteCards is first started, to customize your environment according to your tastes and the idiosyncracies of your site.

justification The uniform spacing of words in a line, so that the line ends flush with both margins.

label A character string which does not represent a card in a Graph or Browser card. In the display below, "Planet" is a label.

Mars ——Planet

font

global to-links

icon

line bar

The left part of a text card where the cursor shifts from being leftpointing to right-pointing allowing you to select larger units (paragraphs and lines) of text.

link

A connection between a source card and a destination card.

link icon

The graphical representation of the link. Clicking on a link icon traverses the link it represents and opens the destination card, or flashes it if it is already open.

Link Icon

link type

A word or phrase assigned by the user which classifies the relationship between two cards. Examples of link types include explanation, question, and answer.

local links

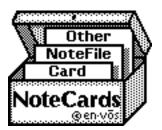

Links whose start point is somewhere in the contents of a card. Local links contrast with global links.

menu

A collection of text strings, buttons, or icons generally used to present a set of possible actions on the screen for user selection with the mouse.

MenuBox Icon

The icon from which you access the NoteCards system menus. Also refered to as the MenuBox.

mouse

A pointing device equipped with buttons.

mouse cursor

A small image (usually an arrow \P) on the display screen that tracks the position of the mouse and lets you do things like reposition the caret. The cursor changes shape under certain

conditions. An hourglass shape () indicates that a process is going on which may take some time to complete. A small image

representing the mouse () which indicates that the system is waiting for a confirmation response before a selected process is performed.

node

Refers to a card or label in a Browser graph. The graph below shows four nodes, one of which (Moons) is a label.
