GREP

By: Larry Masinter (Masinter.pa@Xerox.com)

INTRODUCTION

Like FGREP of Unix: searches for strings in files.

(GREP *STRS FILES OUTSTREAM*) [Function]

STRS is a string or a list of strings. *FILES* is a file or a list of files (including * wild-cards). Searches for the given string(s) in the given file(s), showing each line on *OUTSTREAM*. The function The function TGREPcreates a scrollable Tedit stream to show the output.

(TGREP *STRS FILES OUTSTREAM*) [Function]

(PHONE *name*) [Function]

Calls (GREP name PHONELISTFILES). PHONELISTFILES is initialized to NIL. (The PARC init file resets it to point to the PARC phone list.)

For example,

```
(GREP (QUOTE ED) (QUOTE {INDIGO}<REGISTRAR>PARCPHONELIST.TXT))
```

will print:

```
(from {INDIGO}<REGISTRAR>PARCPHONELIST.TXT;3)
4183   <Endicott>, Fred   35-1354
4435   <Fiala>, Ed 35-2166
4598   <RKennedy>, Ray    34-78
4839   <McCreight>, Ed    35-2146
5759   Pedersen, Jan      32-202
4818   Satterthwaite, Ed *    35-2174
MES    Solcz, Edward J.  8* 348-1214
ATA    Wahlenmeier, Fred 887-4018
```
